DETAILED ACTION

Claims

1. Claims 1-21 are pending.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 10 January 2002 (Paper No. 5) was considered by the examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 7-12, 14-15 and 20-21 are rejected under 35 U.S.C. 102(b) as being anticipated by McCullough et al (US 5,049,349).

McCullough teaches composite containers in which a thermoplastic nylon (col. 8, line 34) parison is extruded into an outer carton and pressurized gas is injected thereinto to expand it into a bag (abstract). The carton has a portion that is concave (see area 14 in Figure 1).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 5, 13 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCullough.

McCullough is discussed above. It fails to teach the use of a U- or I-shaped rigid outer element, the metal outer layer or the particular articles recited in claims 16-19.

The selection of rigid outer layers having any desired shape is deemed a matter of design choice, depending upon the shape desired for the final product.

The use of a metal outer layer in the container of McCullough would be an obvious way to control the permeability of the container, since metal layers are known to inhibit the passage of gasses into containers.

The use of the McCullough technology to produce articles having various shapes and uses does not render the articles patentable over the McCullough teachings.

Allowable Subject Matter

7. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The ribs recited in claim 6 are not taught or suggested by McCullough.
